

Moving the mic sideways helped a bit

	Played from source speaker						
Band	Source	Error (reverb)	Old ref	Centered ref	Far ref	Side Mic	Further side mic
0-200 Hz	3.91	1.86	22.24	21.11	13.52	14.93	9.84
200-300 Hz	16.22	11.88	48.03	46.05	33.52	35.14	24.49
300-700 Hz	67.62	62.69	26.98	28.68	41.89	42.11	52.91
700-1k Hz	3.75	8.77	0.91	1.16	2.72	2.22	3.51
1k-2k Hz	6.80	8.49	1.36	2.11	5.56	4.16	6.15
2k-5k Hz	1.70	6.62	0.48	0.89	2.79	1.44	3.10

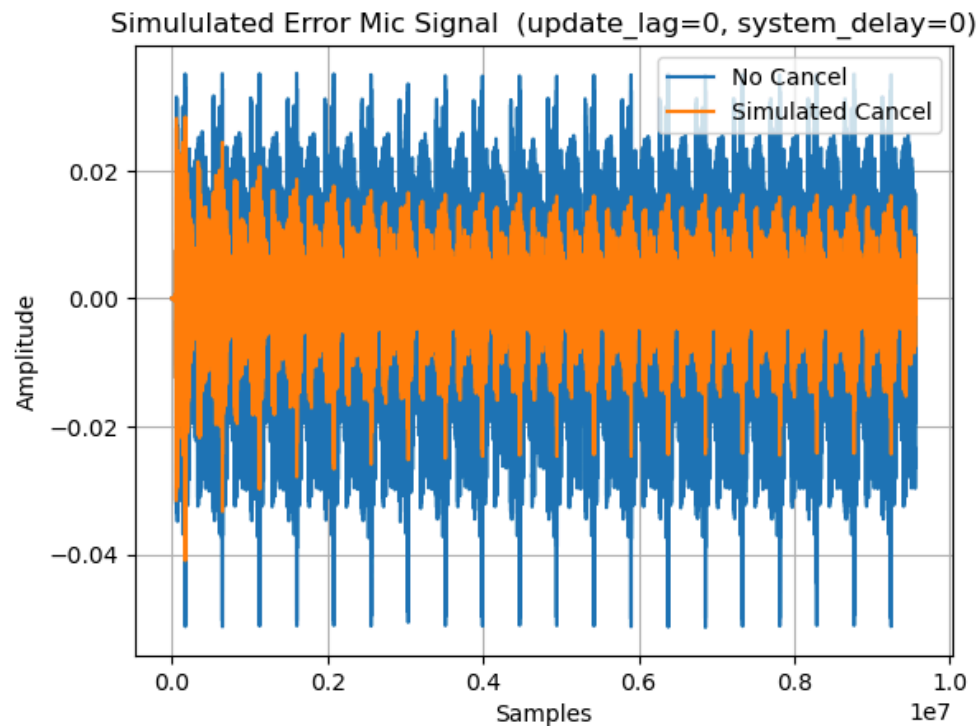

I couldn't figure out using the source instead of the ref

- The sharc is seemingly getting no ref signal
- Tried both audio in and line in with an adaptor, swapping the prongs on the y
- There was one maybe fluke where line in recorded stronger ref signal, but updating didn't happen
- Passing through the in to out seemed to work although with significant power loss

Offline simulation works with no lag

- -9.4dB
- Same params used in a decent offline cancellation

- With lag it doesn't work
- Added update lag, and created a delayed control buffer with the same amount of lag
- +5.39 dB
