

SHARC Delay

- Speakers facing away from each other
- Played a click through the source
- SHARC passed through to the panel
- Measured peak difference in samples of the mic recordings

Block size	32	16	8
2 cores	258 / 5.375ms	179 / 3.729ms	138 / 2.875ms
1 core	193 / 4.021ms	146 / 3.042ms	122 / 2.542ms

- For 2.543ms, distance should be at least .86m away
 - I used a bit more than 1m
- Adaptive filter does not overrun the callback time when compiler optimizations are on

SHARC Cancellation

- Still searching for stable params
- Used 122 lag samples here
