

Previous best results:

dB reduction: -6.75

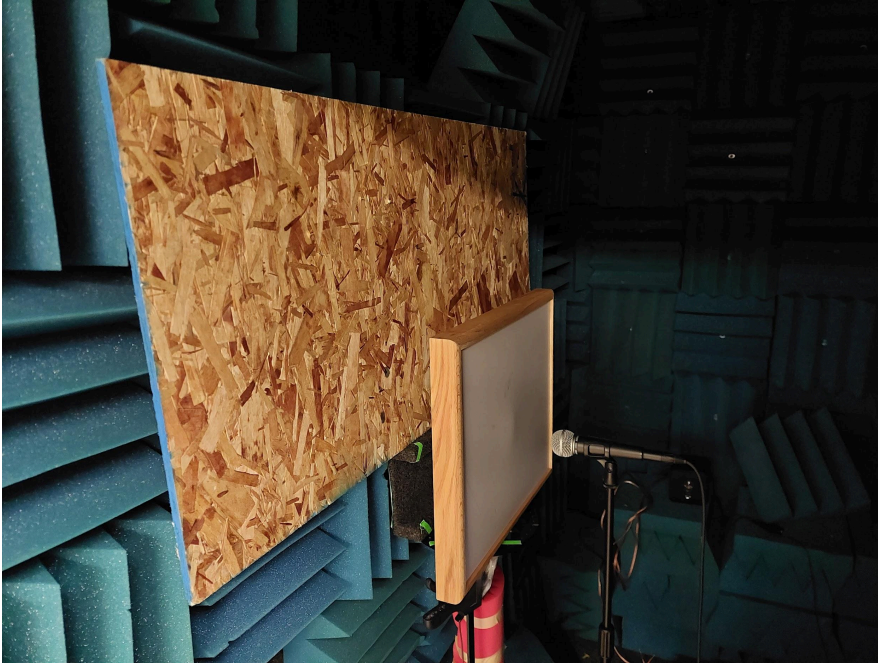

dB reduction: -5.56

System delay:

- Moved speakers to be ~2.5m apart
- Added a sheet of plywood behind panel to increase reflections
- Replaced panel driver

- Can't get the same level of cancellation
 - Buffer size of 64 isn't completely stable, there are clicking noises. 128 is stable
 - 64 still cancels better than 128, probably due to less delay
 - Increasing the gain did not improve cancellation

-2.2dB
